VALET ORGANIZERS GOES GREEN:

Valet Organizers proudly announces the introduction of our new fully **Green** product alternatives. A long time leader in custom home organization, Valet Organizers again takes the lead in becoming the first Bay Area Company within our field to offer completely eco-friendly product solutions.

SKYBLEND™ PARTICLEBOARD:

Roseburg Forest Products SkyBlend™ is SCS (Scientific Certification Systems) and EPP (Environmentally Preferable Products) certified 100% pre-consumer recycled wood fiber particleboard that has **no Urea Formaldehyde added** during the manufacturing process. Third party testing verifies SkyBlend™ formaldehyde emissions (.00-.01 ppm) are no greater than levels occurring in outdoor ambient air conditions. These features can potentially contribute to achieving up to five Leadership in **Energy and Environmental Design (LEED™)** credits. SkyBlend™ combines low emission standards, certified recycled content, sustainable raw materials, with the reliability and proven industry track record of the nations' largest integrated producer of particleboard, thermally fused melamine and hardwood veneer panels.

SkyBlend™ is available as a standard in Valet Organizers Select series, currently featuring our new **Rustic Cherry** and **Manhattan Mocha** finishes. Also, for a moderate premium, SkyBlend™ can be obtained in any of Valet Organizers standard melamine finishes on an individual job basis.

MELAMINE EDGE BANDING TAPE:

Furthering our commitment to providing eco-friendly product alternatives, Valet Organizers uses only melamine edge banding tape in its Furniture and Closet product lines. Unlike the more commonly used PVC edge banding tape that contains vinyl chloride and utilizes lead as a stabilizing agent, the chemical compound Melamine is safe, hygienic, non-allergic and highly resistant to heat, chemicals and moisture. Melamine tape also maintains its original color and will not yellow over time, a common issue with PVC tape.
